

HWL GARDEN PLANNER 2026

How I Use This Garden Planning Pack

This packet is designed to help you plan the entire growing season clearly and calmly, without redoing work or second-guessing yourself.

Here's how I use it:

- Begin by listing all seeds on hand, including both saved seeds and purchased seeds.
- Place one seed order for the full growing season, even though not everything is planted at the same time.
- Use the Seed Starting Order sheets to prioritize what needs to be started first and what can wait.
- Remember that not all crops are started in spring — some are intentionally started in late summer for fall planting.
- Use the graph paper pages to sketch beds and containers by crop type, not individual plants, to make rotation easier.
- Expect to revise and adjust as the season unfolds — this is a working plan, not a finished document.

This system is meant to support how real gardens actually work: flexible, seasonal, and always evolving.
